Volume IV Issue XI

**Dear Ruth Lorenzen,**

Al Gore, under the umbrella of the "Green" movement, has tried to lure us into believing that global warming (or climate change, as I prefer to call it) is the most formidable challenge facing this planet. But if one "pulls the string a little," one finds out about "carbon-credits," which is a way to penalize and tax "polluting" countries. This is just another scam to tax various countries and to add additional economical stress onto the general population.

Al Gore's solution to drop iron filings into the ocean was extremely short-lived, as it didn't clean up the ocean at all, but caused severe algae bloom. Of course that did not get any news coverage. Neither Al Gore, nor his scientist buddies have any workable solutions to handle any part of the global warming or CO2 issue.

On the other hand, the people who make money from oil, pharmaceuticals, and war are creating what I call a tsunami of global food crisis! These vicious merchants of chaos have now figured out a way to turn their cheap, nutritional less, toxic GMO commodities such as corn, Canola, soy, and cottonseed oil into expensive commodities. How? By creating laws that mandate cheap food sources be converted into biodiesel. It sounds good initially- that's the problem. A more in-depth look will show that it is a powerful plan to create a giant tsunami that will threaten to undermine global political and economic stability.

According to the World Bank, just over 1 billion people live on one dollar or less per day. People in the poorest countries in the world spend 80% of their income on food. So when you and I have hardly noticed that the bread we pick up from the local bakery has doubled in price over the past year, it is because only 10-15% of our budget is spent on food items. In many emerging economies the number is much higher. Chinese consumers spend 28% of their income on food. In India it is 33%. If you want to know how much it is in your country, go to:

<http://www.ers.usda.gov/briefing/cpifoodandexpenditures/data/2006table97.htm>.

### Grain to Meat Ratios:

Pouring on the coals of fear, the mainstream news media talk about the grain to meat ratio. Instantly, people draw the conclusion that meat is dependent on grain. [Therefore, they will expect meat, grain, and everything else to go up in price.] However, this viewpoint is strictly referring to the giant toxic factory-farming industry that utilizes genetically engineered corn and soy to feed chickens, pigs and cattle. Thus, it "appears" that this is "normal" fodder for these animals - hardly the truth. They totally ignore Mother Nature's ideal scene for these animals - almost NO grain!

## The holistic organic solution:

What has been totally missed from this picture are the simple facts that chickens eat primarily insects and may need minor amounts of grain supplements. Pigs are omnivores and primarily should be foraging for their own food and eating meat and vegetables. Cows should be eating 100% grass-not any amounts of grain. People are being lured into false impressions and statistics by the media and behind them, the vested oil and pharmaceutical companies.

Had we applied truly "sane" organic growing technologies, this is what you would see:

Chickens would eat 70% insects and 30% fermented grains, changing the

grain to meat ratio from 2.6 pounds of grain to one pound of meat to a highly profitable 0.3:1!

Pigs would have a 3:1 ratio instead of the existing commercial farm's 6.4:1 ratio.

Cows would have a 0:1 ratio instead of a 7-8:1 ratio. [100% grain less]

We would reap healthy meat filled with energy and nutrition for our bodies, instead of our existing commercial empty harvest which happens to also be toxic due to antibiotics, steroids, and filthy living conditions, which contributes to the massive pollution of our environment.

We could apply a sane organic method like my Go Beyond Organic™ method to convert our existing scene into a 100% non polluting, highly nutritious harvest. We have the know-how we just need to apply the knowledge. We could revolutionize the food industry by creating farm ecosystems of healthy animals and sustainable crops. All that is needed is for YOU to talk to your friends and your friends to talk to their friends to help me get the help/funds needed to make Go Beyond Organic™ method a fact. A wise investment can put The Family Survival Farm™ Farms all over the globe, which will of course change the existing paradigm. We would recruit farmers with existing commercial farms that have large plots of land that would love to convert to clean healthy organic methods plus a forward thinking investor that will make the Go Beyond Organic™ method a reality. Timing is everything!

While the chaos merchants are making food prices shoot out into the stratosphere, this for sure will make The Family Survival Farm™ Farms all over the globe an incredible investment.

How are the chaos merchants going to jack up the price of food? Through

## Biofuels!

Right now, Bill C-33 provides a \$2.2 billion subsidy for biofuels and requires that all gasoline include 5% biofuel content by 2010. Sounds good doesn't it? Yet the truth is that biofuels will do more environmental harm than good. Converting food crops to fuel, amidst a serious artificially created food crisis, will result in increased food prices and speculation.

### **Biofuels the Evil Plan:**

Biofuels/Biodiesel is truly the most vicious plan to starve the population and severely increase the price of foods. First of all, biodiesel costs a fortune to manufacture. [39% more] It requires petroleum oil to run the machinery and petroleum oil to make the fertilizer, pesticides, herbicides required for the growing of crops to create the biodiesel. If this isn't bad enough, biodiesel doesn't even burn clean! And depending on the commodity that is used the fuel has a very poor gas mileage. Notice that when you buy the added 10% ethanol gasoline, your gas mileage starts to drop.

### **The inevitable solution - Fire from Water:**

You may think that the suggestion of burning water is a pie in the sky nutty dream. I am here to tell you that since the 1920's, there have been several hundred patents on the subject of converting water into fuel.

One of many visionaries:

The water fuel cell is a device invented by American Stanley Meyer, which he claimed could convert water into its component elements, hydrogen and oxygen, using less energy than can be obtained by the subsequent combustion of those elements, a process that results the reconstitution of the water molecules. Thus, if the device operated as claimed, the combustion cycle would start and end in the same state while extracting usable energy, thereby violating the first law of thermodynamics and allowing operation as a perpetual motion machine. He got the usual severe smearing routine that the mainstream media always does in order to discredit credible inventions. But Stanley just persisted in proving his technology was genuine. Unfortunately, that only infuriated the powers to be and they killed him. If his invention was truly a fake why would they have to use the ultimate silencing tool?

Good News!

Fortunately, there are many other different technologies that can convert water into fuel. <http://www.water4gas.com/2books.htm>

<http://www.runyourcarwithwater.com/?hop=1373car>

[http://au.youtube.com/watch?v=6Rb\\_rDkwGnU](http://au.youtube.com/watch?v=6Rb_rDkwGnU)

The PICC, Pre-Ignition Catalytic Converter is a breakthrough new technology that could get your car up to five times the gas mileage! Its genius is its simplicity. Here's how it works:

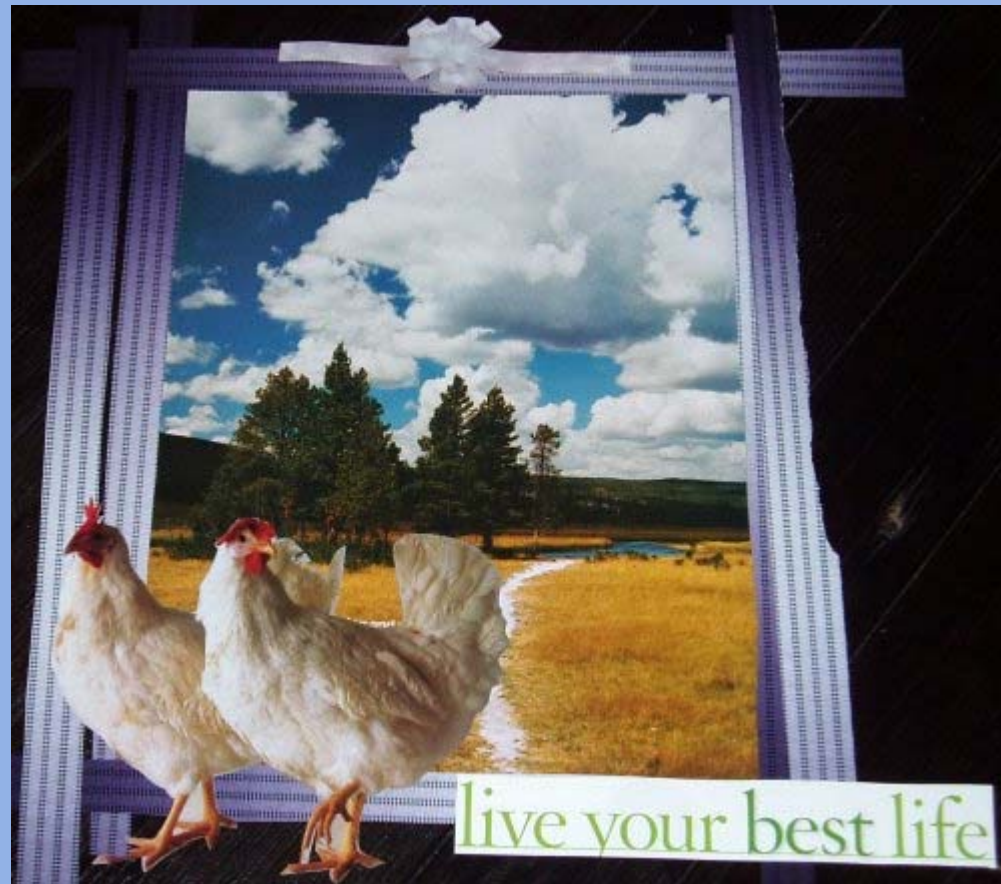

<http://www.preignitioncc.com/flash544G/flashPiccHi.htm>

These are just a few of the many Websites that offer workable technology for

the various applications for generators and various types of engines. This makes wind power, solar power, methane gas converters obsolete!

Why should we bother to work with all those alternative solutions, especially biodiesel when you can be burning water? Don't we live on a water planet? How insane can we get?

Life as a game has a cycle. It always consists of a "start", a change and/or continuance of the game and of course the ending of the game. At the end of all games there is ALWAYS a NEW START of the next game. There is NEVER a permanent end/stop without something following it as a new start. It should be obvious to many of us by now that we are in-between a new starting civilization and an old, corrupt, and dying civilization. Presidential candidates that are well loved and supported [Ron Paul] get virtually no mainstream media coverage, while the two faced criminals are getting all the coverage. Do they really think we are all stupid and can't see that the mainstream media is the mouthpiece of vested interest propaganda? The fact is we ALL MUST become much more courageous and change the paradigm of absolute control by a few to a free and happy new civilization. Like all things there is a window of opportunity to execute! When the opportunity departs one is left with regret and remorse. I am afraid if we miss this time; we may potentially fall into the darkest of the darkest Dark Ages.

Solutions To Our Bright New Future - The Family Survival Farm:  
The Family Survival Farm focuses on super high nutrition and is 100% pollution free! Ideally it should be a 4,000-10,000 acre farm consisting of mineralized grass fed cattle, broiler chickens, eggs, fish, fruits and vegetables. Healthy plants and animals have strong immune systems and have inherently strong resistance to disease, heat, cold, wind and other natural environmental stresses. Insects and disease avoid healthy plants and animals. Insects are Mother Nature's garbage collectors.  
In order to support healthy plants the water structure and soil microorganisms have to be of a very high quality and harmony.

Through 20 years of research I have created an agricultural technology that majorly increases growth and crop yields, highly nutritious, disease and insect free plants and animals. The technology consists of:

1. Ensure that the correct water is being used (correct structure of the water, pH, minerals, volume, frequency of watering, time of day that the watering is done, etc.).
2. Ensure there is an abundance of correct soil-based microorganisms that are active and proliferating.
3. Ensure volumes of soil creatures exist, such as earthworms, cockroaches, various beneficial insects, etc.
4. Ensure the air is appropriate for the plants (i.e., tree spacing, wind blocks, quality of air, etc.)
5. Ensure the FULL spectrum of minerals exist and, most importantly, that they are bio-available.

Ultimately, our focus is ensuring the water, air, earth, and microorganisms are harmoniously working together, not working against each other.

The Go Beyond Organic™ is a very unique self sufficient system that is ecologically enhancing. The Go Beyond Organic™ technology consists of 32 specific factors to provide a consistently standardized farming environment. Hydroponics systems are used for vegetable and fruit growing to out produce soil growing methods by 2 to 25 times. Frequency generators are used to control growth rate of plants and creating an environment that is not conducive for pathogenic microorganisms to proliferate. Several other factors make the Go Beyond Organic™ system superior and more efficient than any other. Man power required for establishment and operation is 100+ people (including administrative) and funding required is \$50 million US per year.

Go Beyond Organic system technology covers every aspect of the Eco system. We ensure that personnel are well-trained in administration and management to ensure that the resulting products are of the highest quality. This is what I call taking full responsibility as the steward of the land. It is about time

that we create the new paradigm for our next generation of farmers.

## Rest Easy™ Antioxidant Turmeric Brew Report

**Rest Easy™**  
A Fermented Turmeric Liquid Dietary Supplement

Rest Easy™ is an antioxidant-rich fermented liquid dietary supplement rich in turmeric and full spectrum, soil-based probiotic microorganisms.

This is an extremely low-calorie product, containing zero calories per serving.

Natural Plus Plus, LLC. 727-447-2344

**Turmeric is one of the world's best antioxidant, and fermenting brings out much more of these antioxidant properties. Rest Easy™ is *designed to help build one's immune system.***

However, it is reported that it has three other side benefits:

- **Some people have claimed that it helps induce a better sleep.**
- **Helped a few people to get over viral infections (most of them caused from mold infections or mold toxicity).**
- **Some people claim to feel a little bit stronger and a have little bit more energy than usual. Rest Easy™ Brew Turmeric (the main ingredient) is one of the world's oldest & best antioxidants & liver support. We ferment the turmeric to make it more bioavailable.**
- **Rest Easy™ is a tonic designed to build the immune system. Because it works on balancing the body, it can help in sleep and give more energy! It seems to help in balancing hormones for either males or females.**

## Trouble Sleeping? [When taken at night]

Most consumers get a better night sleep!

## Low Energy? [When taken in the morning or afternoon]

Feel stronger. Have a boost of energy especially around the afternoon "energy-slump" time.

## Viral or Mold Infections? [1-4 oz. 3-4 times/day]

A stronger immune system helps one get better faster.

## Menstrual Issues? [2-4 oz. as needed or 1-4 times/day]

Wow! For females, this can really bring fast relief!

In about 10-20 minutes! [It majorly helps if one gets off artificial/diet sweeteners 100%]

*New Name Inner Garden previously known as Cultured Molasses*

**Inner Garden™**  
A Liquid Dietary Supplement

Inner Garden™ is an antioxidant-rich fermented liquid dietary supplement rich in full spectrum, soil-based probiotic microorganisms.

This is an extremely low-calorie product, containing zero calories per serving.

**Inner Garden™**  
Fermented Liquid Dietary Supplement

**Supplement Facts**  
Serving Size: 1 ounce (2 tablespoons)  
Servings Per Container: 32

## Inner Garden™ a.k.a. Cultured Molasses

- For skin bruises or cuts: use a 50% dilution with water and wash the cuts and bruises to prevent pathogenic bacteria from forming and to help speed up healing.
- For skin diseases such as psoriasis, eczema, dandruff, etc - Use the Inner Garden™ at full strength for topical application. Apply directly to the affected area and let dry (test a small area to make sure no adverse reactions occur).
- For deeper cuts, and for animals, I directly apply the straight Inner Garden™ into the wound. This will help healing and prevent infections. With animals, I would also spray their entire body so as to prevent contamination. (Comb the fur backwards and spray into the base of the fur, then comb the fur back to its normal direction)
- For eye infections, dilute the solution 1/2 to 1/3 dilution with clean water and rinse eye thoroughly several times a day.
- For extending raw milk & cream (this does NOT apply to homogenized milk): Mix in 1 - 2 teaspoons of IG per gal. of milk & 1 teaspoon per qt. of cream (more than this and it will begin to turn into yogurt). Fermenting foods. Inner Garden™ can be used in place of whey, but you should do experiments as the species of microbes are different and may create different tasting foods. 14th Century soda pop: this can be made by adding 2 tablespoons of Inner Garden™ to 1 gallon of freshly squeezed orange juice, grape fruit juice and possibly other acidic-type fruit juices. Let the mixture sit on the counter for 1 - 3 days until it begins to fizz. Usually by the second day the mixture will start to fizz and this is the point you want to immediately place it in the refrigerator to slow down the fermentation process. The soda will continue to ferment in the refrigerator so it should be consumed within +/- 3 days. Though it is still healthy to drink, it starts to take on a bitter flavor.
- For mildew/mold problems: Use 1:20 to 1:50 Inner Garden™ to water and spray on the surfaces. (test a small area for color fastness on fabrics before applying) Flood damages: see specific instructions on mold handling.

- Making compost: Dilute 1:1:100 (1 part Inner Garden™: 1 part Molasses: 100 parts water) shaken up violently and sprayed and mixed thoroughly in a 1:30 (1 part Nitrogen [chicken, rabbit, cow or other manures] : 30 parts Carbon [organic matter/leaves/branches]. After thoroughly mixing the compost, you should also tarp the compost for 4-6 weeks to keep the air out so that you have a fermentation process which will produce many B vitamin and E vitamin complexes. Thus, creating significantly higher quality compost. Call for more information.
- When spraying on living plants and soil containing living plants, a 1:500 (1 part- Inner Garden™: 500 parts water). DO NOT EVER spray stronger than this dilution on living plants or you'll end up composting them!
- There are several other applications such as floor washing, air freshener, removal of odors, reduction of paint odors and toxicity, as well as cleaning ponds, rivers, lakes and oceans.

Disclaimer: This document is not intended to diagnose or treat any illness. See your health practitioner for treatment of any medical conditions. This is merely a document listing all the known applications of Inner Garden™.  
of Inner Garden™.

## Testimonials:

Every year, my allergies are so bad that I often can't work. My eyes swell up, my sinuses inflame, and I am miserable. This year, my friend gave me some Rest Easy when I was having some sleep issues from hormonal problems. The Rest Easy™ not only handled my sleep problems, giving me a wonderful, deep, refreshing sleep, but I was surprised to learn a few days later when I had my monthly period, that for the first time in 30 years, I had no cramping. Then, I realized that my allergies were minimal. I looked at the pollen count, thinking that it was low, and saw that it was very high, yet I had no allergy symptoms! Thank you to my friend and thank you to Winston for creating this wonderful product!

--NL

## **Pandora's Box:**

It is about time that we put the evil back into Pandora's Box and close it forever! It is time to lock all the destructive types of GE (Genetic Engineering) and its products the GMO (Genetically Modified Organisms). We need to gather up the old paradigm of petro-chemicals, killing of the soil-based microorganisms (Due to the petro-chemicals used), and the insane practice of never adding any carbon to the soil (Farmers are told to burn the wood and poison the weeds, instead of utilizing them to improve their soil).

# Something Can Be Done!

Talk up "The Family Survival Farm™" with your friends and get your friends to talk it up to their friends so we can get the funding and forward thinking investor. Yes, you and I together can make it happen! Affordable, clean, and nutritious food is right around the corner!

Flourish and Prosper!

**Sincerely,**

Winston W. J. Kao
